Response to Arguments

1. Applicant's arguments with respect to claims 1-3 and 5-7 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Koch, U.S. Patent No. 5,218,427.
4. As per claim 1, Koch discloses a method for converting range data of an object to a model of the object (column 3 lines 47-55 and figs 1 a&b), comprising: generating an adaptively sampled distance field from range data (column 22 lines 1-6);,and editing (sampling higher densities at certain regions, like edges, depending on how much detail the user wants is editing, column 22 lines 4-6) the adaptively sampled distance field to produce the model (column 22 lines 20-25).
5. As per claim 2, Koch discloses converting the adaptively sampled distance field to a triangle model (column 22 lines 20-25 and figs 18 a&b).

Allowable Subject Matter

6. Claims 3, 5-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
7. Claim 7 is allowed.

Art Unit: 2671

8. Prior art of reference does not teach converting the range images to a plurality of range meshes in a single coordinate system.
